

Good morning everyone. I am Tanvi naik and my roll number is 1143. My project is a Carpooling Website. The main idea behind Car Pooling is that instead of each person driving their own car, a group of people may travel in one vehicle. For example, if a person driving alone to Pune has 3-4 seats available in his car, he can share them with others travelling to the same area at the same time. As a result, rather than travelling in separate vehicles, they may share a journey in one vehicle. It will also result in lower travel costs for both of them, and they will have each other's company while on the journey. This can help reduce traffic congestion on the road by reducing the number of cars on the road, as well as pollution.

Finding a person going to same location at same time is very difficult so this is where users can use my RideAlong website. Users can post their ride details or find their compatible ride.
